

Everything You Need to Know about COVID-19 Vaccines

Read the chart below to understand the COVID-19 vaccines better. All of the COVID-19 vaccines received Emergency Use Authorization (EUA) by the Federal Drug Administration (FDA).

They are all safe and highly effective.

	Pfizer/BioNTech vaccine	Moderna vaccine	Janssen (Johnson & Johnson) vaccine
Target population	<i>Anyone 16 years and older.</i>	<i>Anyone 18 years and older.</i>	<i>Anyone 18 years and older.</i>
Vaccine efficacy	All the vaccines are $\geq 89\%$ effective at preventing hospitalizations. No one who received a COVID-19 vaccine died from COVID-19 during any of the clinical trials.		
	<i>95% effective at preventing severe COVID-19.</i>	<i>94% effective at preventing severe COVID-19.</i>	<i>85% effective at preventing severe COVID-19.</i>
What are possible side effects	<i>Injection site pain, fatigue, headache, muscle pain, joint pain, and fever.</i>	<i>Injection site pain, fatigue, headache, muscle pain, joint pain, and fever.</i>	<i>Injection site pain, fatigue, headache, muscle pain, joint pain, and fever.</i>
Is it safe for pregnant individuals?	<i>Pregnant/lactating people should discuss risks and benefits with their provider.</i>	<i>Pregnant/lactating people should discuss risks and benefits with their provider.</i>	<i>Pregnant/lactating people should discuss risks and benefits with their provider.</i>
When am I considered fully vaccinated?	<i>You are considered fully vaccinated two weeks after you complete your vaccine series. 2 doses of the Pfizer and Moderna vaccines and 1 dose of the Janessen vaccine.</i>		

With all vaccines, there is still a small chance that you can get and spread disease. To protect our relatives, we all need to *wear our masks, watch our distance, and wash our hands.*

With vaccines, we will overcome this pandemic.
