

DID YOU KNOW?

You could have a sexually transmitted disease (STD) and not know it.

The STD syphilis, among others, has been increasing across the Great Plains Area.

You may have **NO** symptoms in the early stages of a syphilis infection.

The more you know, the more you can protect yourself.

- Practice safe sex
- Get tested regularly

Testing is the best way to prevent and treat any STD.

Talk with your provider or local Tribal Health Facility for testing availability near you.
